

RiteShip. A customized wireless solution for better results.

Over the years, Verizon Wireless has earned a reputation for providing custom-tailored wireless solutions for businesses of all sizes. **VZCustom** from Verizon Wireless offers solutions that are as unique as the challenges today's businesses face. Here is just one example.

Challenge

Studies show that from start to finish, inventory accounting, order processing, fulfillment and shipping can typically consume up to half of a normal workday. Working with **VZCustom**, WYT Solutions (WYT) has developed software that enables companies to wirelessly monitor inventory, facilitate orders, track shipments, and more. It allows multiple departments to be on the same page through every step of the process. WYT needed a reliable wireless network and experienced partner to accommodate the demands and complexities of the new software application they were developing. They turned to Verizon Wireless.

Solution

Using Verizon Wireless **BroadbandAccess** and **NationalAccess** wireless data networks and armed with PDAs or laptops with aircards, Verizon Wireless and WYT are helping customers to cut wasted productivity time, freeing up resources for more valuable tasks.

Make your company fast on its feet.

WYT developed RiteShip; a truly mobile, end-to-end, click-to-ship solution that combines the power of a streamlined order fulfillment solution with the full complement of United Parcel Service (UPS) OnLine® tools and leverages the Verizon Wireless network to its greatest advantage.

Equipped with a Verizon Wireless PDA, customers have everything they need to work more efficiently:

- Management and salespeople can communicate, gain approvals and solve problems by exchanging time-sensitive information – actually processing orders while out of the office or in the field
- Warehouse personnel are more productive and can literally think on their feet, accessing inventory and customer orders and producing invoices wirelessly without returning to their desks
- Employees and customers can be informed of each step in the fulfillment and shipping process through wireless email and instant messaging

All of this through an easily implemented solution and without the need for an expensive infrastructure.

RiteShip application running over the Verizon Wireless BroadbandAccess network on an XV6600 PDA.

“Our customers want to access company data wirelessly using their PDA or laptop. WiFi-based solutions are not secure enough and require too much time consuming reconfiguration as people move from hotspot to hotspot. The Verizon Wireless BroadbandAccess network provides a secure, reliable wireless platform that makes it possible for our clients to run their entire business remotely.”

– Robert Tripp: Co-founder, WYT Solutions
